

Environmental policy statement

Our goal is to be a leader in sustainable environmental practices and to continually improve the environmental credentials of our operations. This statement sets out Vontier's strategic environmental commitments.

As a leading organization operating in the global industrial technology sector, we are committed to the principles of sustainability and promote its importance so that sustainable solutions are integrated into our work. Managing the effect of our activities on the environment is a business-critical issue for Vontier and we wish to have a positive impact.

Management

- We understand the potential environmental impacts of our work and apply robust systems to reduce risk and positively promote opportunities.
- We comply with all applicable legislation, along with client and stakeholder requirements. Where laws and regulations do not provide adequate controls, we will adopt our own standards to protect the environment and further our goals.
- We are committed to achieving independent accredited certification to ISO 14001 for all our manufacturing sites.
- We are committed to ensure that through training, seminars, and other communications, our employees and direct suppliers are aware of this environmental policy.
- Processes and procedures are fully integrated into corporate management systems to ensure we are accountable for meeting the commitments in this policy.

Objectives

We have challenging long-term objectives and performance indicators covering all business-critical issues. These include:

Responsible procurement

We are committed to procuring materials, goods, and services responsibly and with assurance from credible third-party certification. We encourage our direct suppliers to embrace best practice through appropriate certifications and management systems. We regularly review supplier products and services to inform the selection of new suppliers.

Resource efficiency

We are committed to global targets aimed at reducing our consumption of natural resources and reducing waste by adopting environmental best-practice and innovative solutions across the company. By 2050 we plan to be a net zero carbon business.

Pollution control

Best practice techniques and behaviours are employed to prevent pollution arising from our activities. We prioritise collaboration with our suppliers, clients, and partners to pioneer new solutions to reduce environmental nuisance and airborne particulates.
